

```
#include <stdio.h>

int main() {
    int n, i, search, found = 0;

    // Input number of elements in the array
    printf("Enter number of elements in the array: ");
    scanf("%d", &n);

    int arr[n];

    // Input array elements
    printf("Enter elements of the array: \n");
    for(i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    // Input the element to search
    printf("Enter element to search: ");
    scanf("%d", &search);

    // Linear search
    for(i = 0; i < n; i++) {
        if(arr[i] == search) {
            found = 1;
            printf("Element %d found at index %d.\n", search, i);
            break;
        }
    }

    // If element is not found
    if(!found) {
        printf("Element %d not found in the array.\n", search);
    }

    return 0;
}
```
